First 3 Project Ideas

1. Fitness app- I want to create a mobile app for Berea College students and the community that connects them to Seabury and other fitness centers provided by the college.

This app will be different because I plan to make the app user-friendly, talk to my audience, and take their feedback on what kind of features they want see in the app.

Major features- Avialiably and reservation of practice rooms
- Workout tips and plans
- Exercise videos
- Group workout link

2. Tour and Travel Website- I was motivated to work on this project concept because I am an international student from Ethiopia and I have most of my family and friends back home who are always willing to show around any tourists that visit Ethiopia. Over the summer I had some friends who were trying to go to Ethiopia and they were asking questions like where to go, stay, visit, and eat. So I decided to create a friendly and budget, and Gps-included website with other features.

3. Planner- This a mobile us that will help users create daily, weekly, and monthly plans. I will use an interface that can easily be navigated by college students.

Features- reminders and notifications as plans approach
- Allows users to create plans and link them to their address for notifications
- Have a feature that allows you to make day-to-day work/study plan
- Users will get Alerts when a plan is not done
